

BELA MD Dermal Infusion

The BELA MD Skin Health Platform takes popular treatments, such as serum infusion and diamond microdermabrasion, to the next level with the latest results-driven technology and serum advancements. Antioxidant hydrogen water infusion, electroporation for enhanced serum delivery, and muscle stimulation to tone and boost circulation, elevate the treatment experience and the results.

Main applications:

- Diamond microdermabrasion
- Infusion of BELA MD innovative serums
- Antioxidant boost with hydrogen water
- Micro-current Electrical Neuromuscular Stimulation
- Electroporation

Versatile handpiece for customizable treatments

The Aqua handpiece offers multiple ways to treat your patients' skin: use with a diamond tip to perform medical-grade dry microdermabrasion or use with a disposable Aqua tip to cleanse and infuse BELA MD bio-infusion serums or antioxidant hydrogen water.

Hydrogen therapy with the H2 module

Hydrogen therapy works by combining hydrogen (H^+) with free radicals (OH^-) to produce water (H_2O). The BELA MD H_2 module transforms tap water into hydrogen rich water which is infused into the skin using the Aqua handpiece to reduce oxidative stress and inflammation while boosting brightness and hydration.

Electroporation for enhanced serum absorption

The BELA MD electroporation handpiece applies a tiny electrical field to the skin which opens intracellular channels and increases the penetration of active ingredients applied topically to the skin. It is ideal to pair with any facial treatment for optimal results.

Double lifting Y handpiece for face and neck toning

The BELA MD Y Handpiece uses microcurrent electrical neuromuscular stimulation (MENS) to provide deep muscle stimulation through a combination of massage and electrical pulses. This helps to promote drainage and health blood flow while enhancing skin tone and elasticity.

Latest generation bio-infusion serums

Each BELA MD bio-infusion serum is designed to target common skin concerns, while providing an overall improvement in skin quality with multi-functional ingredient blends. Advanced encapsulation technology protects serum ingredients and stability, while enhancing penetration to boost results.

CLEAR SKIN

- Reduce excess oil
- Calm & soothe skin
- Restore optimal hydration

EVEN PIGMENT

- Reduce photo-damage
- Brighten complexion
- Even skin tone

BRIGHTEN & PROTECT

- Antioxidant action
- Soothe skin
- Improve texture
- Brighten complexion
- Reduce signs of skin fatigue

CALM & HYDRATE

- Restore skin barrier function
- Boost hydration
- Reduce TEWL
- Improve firmness and elasticity
